## DataFlex Reports @ Work

---

Presented by: Vincent Oorsprong

# Report integration

---

- Key feature of DataFlex Reports
- Available thru a library with a wizard and a template to generate a Windows GUI or Web interface

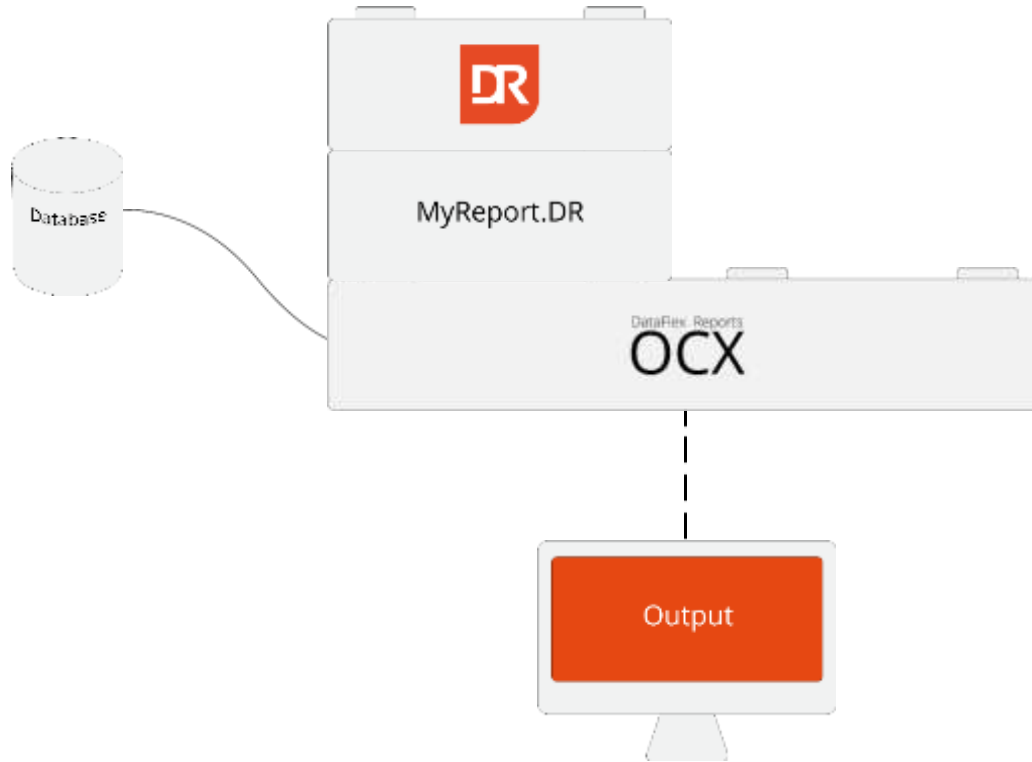

# Technical

---

- How does a report loading and running work?
  - From DataFlex Reports Studio
  - From an application

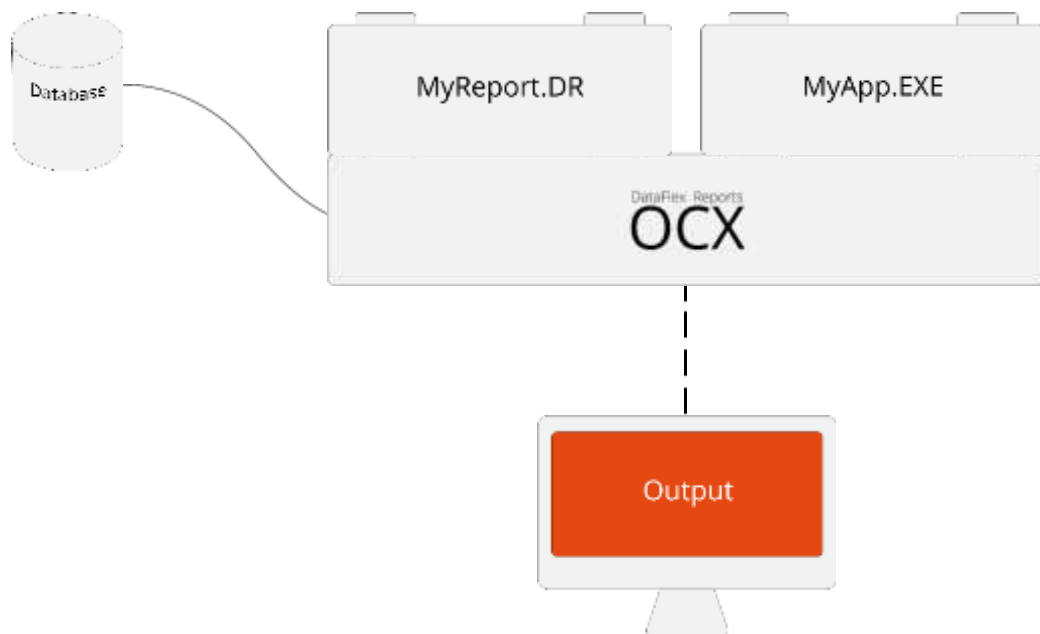

# From the DataFlex Reports Studio

---

# Via integration

---

# Windows

---

Report integration in Windows GUI

# Windows preview options

---

1. Embedded in report view
  2. Using a modal dialog
  3. Creating a MDI view (non modal)
    - Users can continue working
  4. Creating a tool panel (non modal)
    - Can be moved to a secondary screen
- `pePreviewStyle` tells `cDRReport` how to preview / display the report

# Embedded in report view

---

- oDRReport object shows the preview itself
- Example: Customer entry view showing all orders

# MDI view

---

- cDRReport class creates a view object to display the report results
- Users can continue working
- Closing the view with the cDRReport object closes the preview view too
  
- Example: Order entry view

# Modal dialog

---

- Can be used to show extra information
- Must be closed before further application actions can be taken
  
- Example: Also ordering this product

# Tool panel

---

- cDRReport class creates a ToolPanel object for displaying the report results
- Can be dragged outside application display area
- Non-modal
- Can be refreshed
  
- Example: Simple customer list

# Runtime Data Source

---

# RDS

---

- Useful for:
  - Reporting on non-database data
    - Web-services
    - File information (e.g. EXIF data)
  - More clever data collection than a report engine can come up with

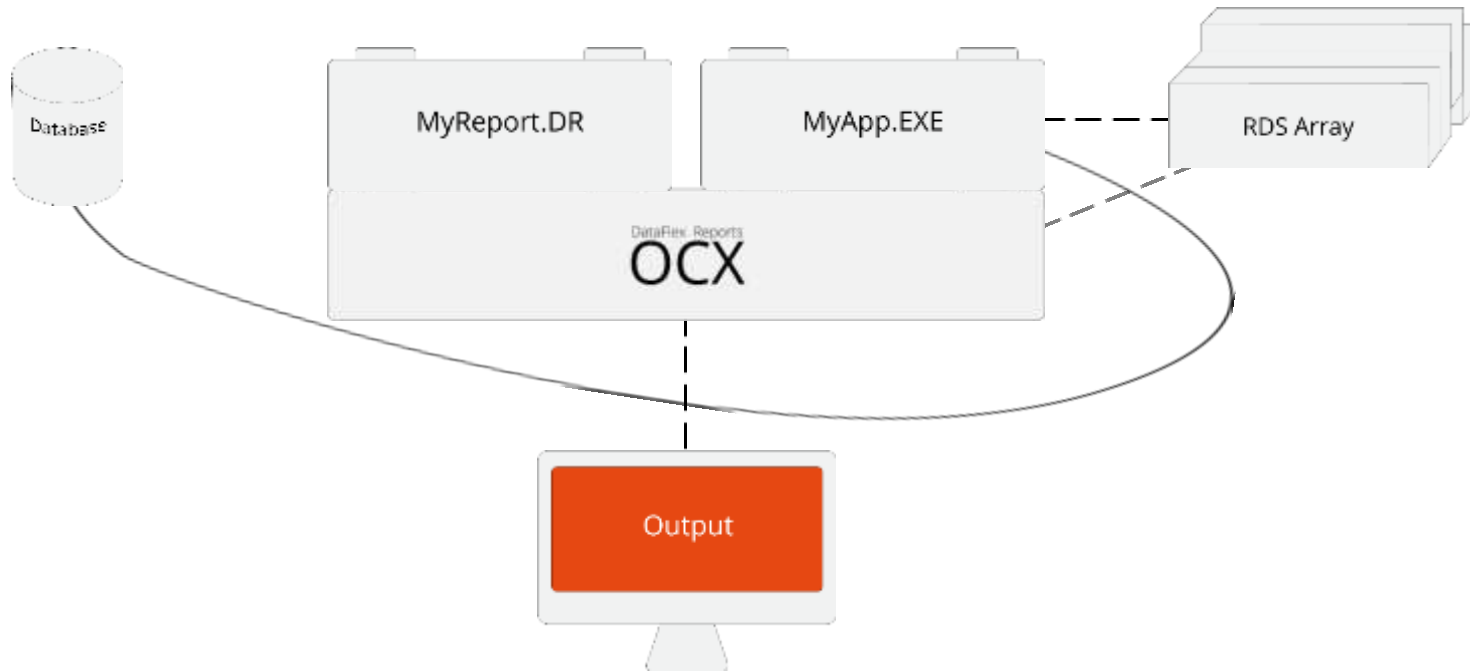

# RDS - technical

---

- Application populates a variant array
- Array is passed to the DataFlex Reports OCX

# Via integration using RDS & database

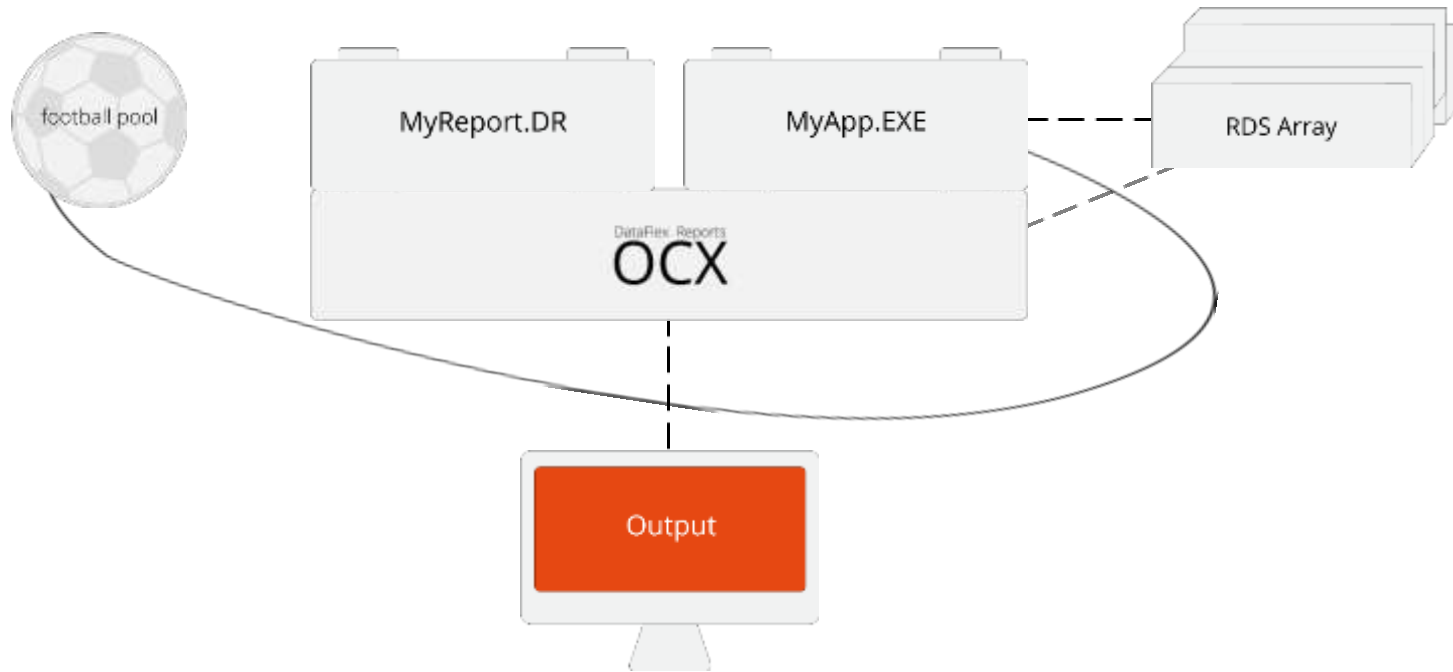

---

# Via integration using a webservice & RDS

---

# RDS Report & Integration

---

- Create the report
  - In the DataFlex Reports Studio
    - Integrate as a “normal” report
  - Via the integration wizard
    - Creates report & integration code

# Differences

---

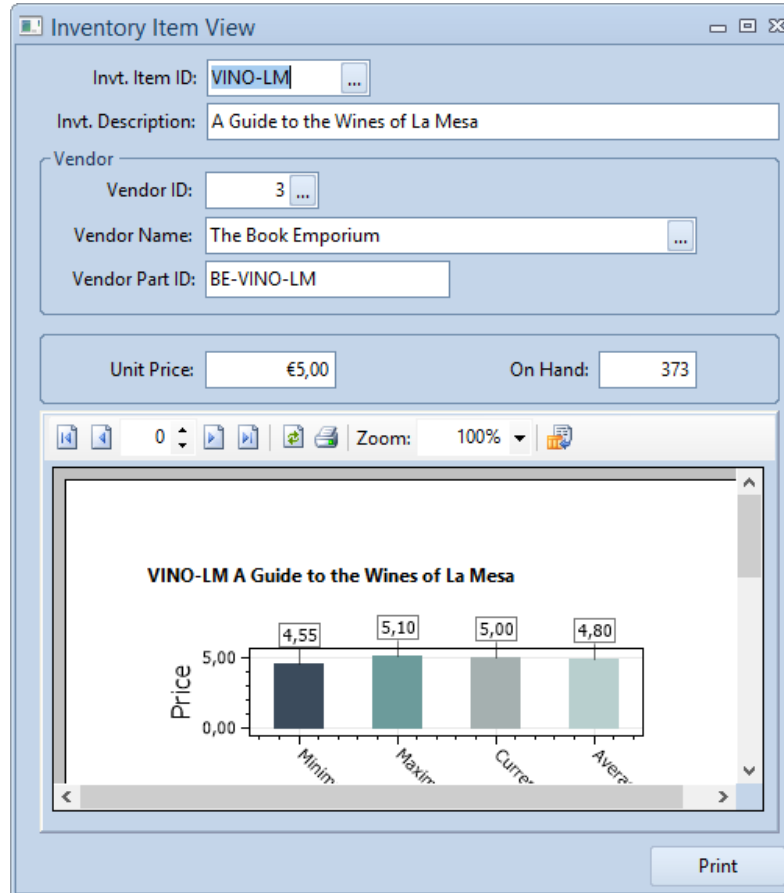

- Via the DataFlex Report Studio
  - You need to figure out all logic to populate the array
- Via integration
  - Code to read data from a data-dictionary is written in the component for you
    - You need to setup filters etc

# RDS Usage example

---

Find sales price difference

# Sales price difference

# Sales price difference – finding data

---

```
Procedure CollectData
  Number nMinPrice nMaxPrice nTotal
  Integer iCount
  Variant[][] vPriceData

  Move 999999 to nMinPrice
  Move -99999 to nMaxPrice

  Clear OrderDtl
  Find Gt OrderDtl by Recnum
  While (Found)
    If (Invt.Item_ID = OrderDtl.Item_ID) Begin
      Move (OrderDtl.Price min nMinPrice) to nMinPrice
      Move (OrderDtl.Price max nMaxPrice) to nMaxPrice
      Increment iCount
      Move (OrderDtl.Price + nTotal) to nTotal
    End
  Find gt OrderDtl by recnum
Loop
```

# Sales price difference – filling the array

---

```
Move (Trim (Invt.Item_ID)) to vPriceData[0][0]
Move (Trim (Invt.Description)) to vPriceData[0][1]
Move nMinPrice to vPriceData[0][2]
Move "Minimum" to vPriceData[0][3]

Move vPriceData[0][0] to vPriceData[1][0]
Move vPriceData[0][1] to vPriceData[1][1]
Move nMaxPrice to vPriceData[1][2]
Move "Maximum" to vPriceData[1][3]

Move vPriceData[0][0] to vPriceData[2][0]
Move vPriceData[0][1] to vPriceData[2][1]
Move Invt.Unit_Price to vPriceData[2][2]
Move "Current" to vPriceData[2][3]

Move vPriceData[0][0] to vPriceData[3][0]
Move vPriceData[0][1] to vPriceData[3][1]
Move (nTotal / iCount) to vPriceData[3][2]
Move "Average" to vPriceData[3][3]

Send TableData C_USEMAINDRREPORTID 0 vPriceData
```

# Active report

---

Clicking in the preview

# Click in the report

---

- OnReportPreviewClick event

```
OnReportPreviewClick C_DRHitTests iPos Integer iSectionId String sObject String sValue
```

```
Case Begin
  Case (iSectionId = 30)
    Case Begin
      Case (sObject = "Customer.Custome
        Send DrillDownToCustomer sVa
        Case Break
      Case (sObject = "Customer.City")
        Send CreateNewCustomerReport
        Case Break
      Case (sObject = "Customer.State"
        Send CreateNewCustomerReport
        Case Break
    Case End
  Case Break
Case End
```

- Example: Drill-down

# Exporting

---

# Export formats

---

- Portable Display Format (PDF)
  - Can be attached to an e-mail
- Comma Separate Values (CSV)
  - Can be read by other applications
- Image (TIFF, JPEG, GIF, PNG)
  - More static than PDF; can also be attached or embedded
- Excel (XLS / XLSX)
  - Directly understood by Microsoft Excel; Formatted report
- Word
  - RTF 2007 standards; formatted report
- HTML
  - As file(s)
  - As stream for the `cwebDRReportViewer`
    - Supports hyperlinks into WebApp

# PDF per e-mail

---

- Create the report
- Integration code to generate a PDF file
- Write code to attach it to an e-mail
  - Use an SMTP OCX or Outlook

# PDF per e-mail

---

```
Get Create (RefClass (cComMail)) to hoMailer
```

```
Send CreateComObject of hoMailer
```

```
    Set ComSubject of hoMailer to "Customer Info Report"
```

```
    Set ComFrom of hoMailer to "DataFlex Sales Department"
```

```
    Set ComFromAddr of hoMailer to "vincent.oorsprong@dataaccess.eu"
```

```
Set psReportName of hoReport to "Customer Info.dr"
```

```
Get OpenReport of hoReport to sReportId
```

```
Get DefaultPDFExportOptions of hoReport to PDFExportOptions
```

```
Move C_drHigh to PDFExportOptions.iImageQuality
```

```
Set pPDFExportOptions of hoReport to PDFExportOptions
```

```
Decrement iCustomers
```

```
For iCustomerItem from 0 to iCustomers
```

```
    Move (sExportFolder - "CustInfo-" - String (iCustomerNumbers[iCustomerItem]) - ".pdf") to sFileName
```

```
    Send AddFilter of hoReport C_USEMAINDRREPORTID "{Customer.Customer_Number}" C_drEqual iCustomerNumber
```

```
    Send ExportReport of hoReport C_drPDF sFileName
```

```
Set ComBodyFormat of hoMailer to 1 // Text/HTML
```

```
Set ComBodyText of hoMailer to sBodyText
```

```
Get ComAddRecipient of hoMailer (Trim (Customer.Name)) (Trim (Customer.EMail_Address)) 0 to iRetVal
```

```
    Send ComClearAttachment of hoMailer
```

```
    Get ComAddAttachment of hoMailer sFileName to iRetVal
```

```
    If (iRetVal = 0) Begin
```

```
        Get ComSendMail of hoMailer to iRetVal
```

```
    End
```

# Web Applications

---

How to use with DataFlex Web Applications

# Web Integration

---

- WebApp.Exe (at the server) generates:
  - PDF
  - Images
  - HTML stream
- For the PDF file a download URL needs to be created to let the browser display the PDF in a web page
- For the Images and HTML stream it is advised to use an object of the `cWebDRReportViewer` class

# Web Integration

---

- Code generation via:
  - Integration wizard
  - Template

# Web Integration - PDF

---

```
Object oReport is a cDRReport|
  Set psReportName to 'Reports per Module in a Chart.dr'

  Function GenerateReport Returns String
    String sReportId sFile sUrl
    DRPDFExportOptions PDFExportOptions
    Boolean bCanceled

    Get OpenReport to sReportId
    If (sReportId <> "") Begin
      Get DefaultPDFExportOptions to PDFExportOptions
      Set pPDFExportOptions to PDFExportOptions
      Get ReportCacheFileName ".pdf" to sFile
      If (sFile <> "") Begin
        Send ExportReport C_DRPDF sFile
        Get pbCanceled to bCanceled
        If (not (bCanceled)) Begin
          Get DownloadURL of ghoWebResourceManager sFile to sUrl
        End
      End
    End

    Send CloseReport sReportId
  End

  Function_Return sUrl
End_Function
End_Object
```

# Web Integration using the HTML viewer

---

- The OCX returns a string array with HTML code in base64 format to support Unicode

```
Function GenerateReportHTML Returns String[]
    String sReportId
    String[] sData
    Integer iArgSize

    Get OpenReport to sReportId
    If (sReportId <> "") Begin
        Get_Argument_Size to iArgSize
        Get ComReportHTMLPreview sReportId (iArgSize - 10) to sData
        Send CloseReport sReportId
    End

    Function_Return sData
End_Function
```

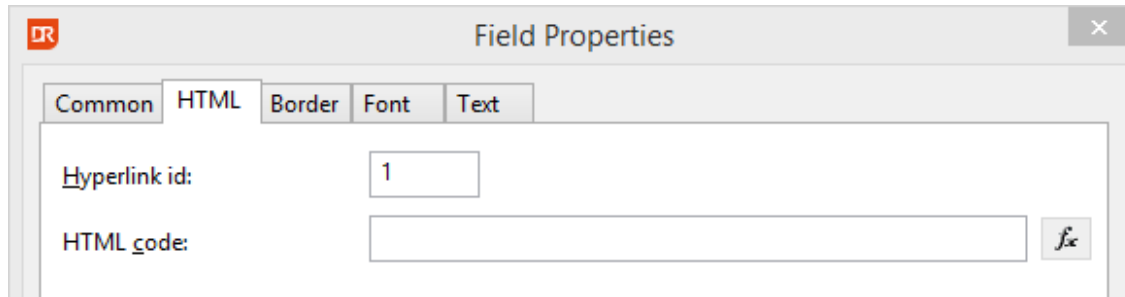

# Report interaction

---

From the HTML viewer

# Web Integration using the HTML viewer

- Fields/Objects need to set the Hyperlink ID

- Response on clicking a hyperlink

```
Object oViewer is a cWebDRRreportViewer
  Set phoReport to oReport
  Set pbServerOnClickActionLink to True

  Procedure OnClickActionLink String sData Integer eDataType
    Send ShowEmployee of oSQLEmployeeModalDialog Self sData
  End_Procedure
End_Object
```

# Results

The screenshot displays the DataFlex Reports application interface. At the top, the logo 'DataFlex REPORTS' is visible, along with a menu bar containing 'File', 'The Solution', 'Reports', and 'Views'. Below the menu, there is a 'Sick Leave Overview' section with buttons for 'Run Report', 'Selections', and 'Documentation'. The main content area is split into two panes. The left pane shows a list of employee names, with 'Abolrous, Hazem' selected. The right pane, titled 'Employee', displays a form with the following fields and values:

EmployeeID:	280
FirstName:	Hazem
LastName:	Abolrous
MiddleName:	E
NameStyle:	0
NationalIDNumber:	398223654
Title:	Quality Assurance Manager
Gender:	F
BirthDate:	22-08-1974
MaritalStatus:	S
Emerg.Cnt.Name:	Sam Abolrous
Emerg.Cnt.Phone:	567-193-4715

Below the form, a table lists other employees:

Name	Gender	Title
Abbas, Syed E		
Abercrombie, Ki		
Abolrous, Hazem		
Acevedo, Humb		
Ackerman, Pilar		
Adams, Jays G		
Agbonile, Ostan		
Ajenstat, Franço		
Alberts, Amy E		
Alexander, Sean		
Anderson, Nanc		
Ansman-Wolfe		
Antin, Zainal I		
Baker, Mary R		
Barbarini, Angel		
Barber, David M	F	Assistant to CFO
Barreto de Mattos, Paula M	M	Human Resources Manager
Bavoli, Steve	F	Facilities Manager
